The algebra section allows you to expand, factor or simplify virtually any expression you choose. It also has commands for splitting fractions into partial fractions, combining several fractions into one and cancelling common factors within a fraction.

Step-by-Step Math Problem Solver

Some students stop halfway believing that there is no way one can continue factoring this particular expression. This tool gives you a chance to first see the right answer and then continue exploring the steps that lead to it if necessary. It is a bad idea to use a factoring calculator to merely get the answers.

Factoring Calculator - Step-by-step math solver

When you enter an equation into the calculator, the calculator will begin by expanding (simplifying) the problem. Then it will attempt to solve the equation by using one or more of the following: addition, subtraction, division, taking the square root of each side, factoring, and completing the square.

Factoring. The process of factoring is essential to the simplification of many algebraic expressions and is a useful tool in solving higher degree equations. In fact, the process of factoring is so important that very little of algebra beyond this point can be accomplished without understanding it.

Factoring - Step-by-Step Math Problem Solver

This page will try to solve a quadratic equation by factoring it first. How does this work? Well, suppose you have a quadratic equation that can be factored, like $x^2 + 5x + 6 = 0$. This can be factored into $(x+2)(x+3) = 0$. So the solutions must be $x = -2$ and $x = -3$. Note that if your quadratic equation cannot be factored, then this method will not work.
