Evidence Of Evolution Vestigial Structure

Among the most cited evidence for human evolution is the existence of vestigial structures, body parts that seemingly have no purpose. Perhaps they once did, but somewhere along the way they lost their functions and are now basically useless.

The 4 Vestigial Structures Found in Humans - ThoughtCo

Vestigiality, biologically speaking, refers to organisms retaining organs that have seemingly lost their original function. The issue is controversial and not without dispute; nonetheless, vestigial organs are common evolutionary knowledge. In addition, the term vestigiality is useful in referring to many genetically determined features, either morphological, behavioral, or physiological; in ...

Vestigiality - Wikipedia

Evidence of common descent of living organisms has been discovered by scientists researching in a variety of disciplines over many decades, demonstrating that all life on Earth comes from a single ancestor. This forms an important part of the evidence on which evolutionary theory rests, demonstrates that evolution does occur, and illustrates the processes that created Earth's biodiversity.

Evolution is a scientific theory used by biologists. It explains how living things change over a long time, and how they have come to be the way they are.. Earth is very old. By studying the layers of rock, we can find out about its past. That kind of research is called historical geology.. We know that living things have changed over time, because we can see their remains in the rocks.
