### Elementary Differential Equations 10th Boyce

A differential equation can be homogeneous in either of two respects.. A first order differential equation is said to be homogeneous if it may be written  $(y') = f(x) + g(y)$ , where  $f$  and  $g$  are homogeneous functions of the same degree of  $x$  and  $y$ . In this case, the change of variable  $y = ux$  leads to an equation of the form  $u' = F(u)$ , which is easy to solve by integration of the two members.
