American Studies. American Studies looks at the pop culture you consume, the music you listen to, the things you buy, the foods you eat, the things you learn, the places you visit, the speeches you hear, the things you read, art and what people make —and examines the ways that identity affects the ways that we experience American culture.

Hemodynamics or hæmodynamics is the dynamics of blood flow. The circulatory system is controlled by homeostatic mechanisms, such as hydraulic circuits are controlled by control systems. Hemodynamic response continuously monitors and adjusts to conditions in the body and its environment. Thus hemodynamics explains the physical laws that govern the flow of blood in the blood vessels.

In conventional electro dialyzers with the classical plate-and-frame equipment (see Fig. 3), the feed channels are created by interposing between the membranes net spacers, maintaining a fixed inter-membrane distance and providing some mixing promotion in the channels. Spacers are provided with gaskets along the perimeter of the channels, which seal the channels and guide the solutions through them.

In fluid dynamics, a stall is a reduction in the lift coefficient generated by a foil as angle of attack increases. This occurs when the critical angle of attack of the foil is exceeded. The critical angle of attack is typically about 15 degrees, but it may vary significantly depending on the fluid, foil, and Reynolds number.. Stalls in fixed-wing flight are often experienced as a sudden ...

Introduction. The production of synthesis gas, primarily a mixture of hydrogen and carbon monoxide, from hydrocarbons has received a great deal of interest in recent years due to the need to produce high-content hydrogen streams for fuel cell applications and internal combustion engines , , , . Industrially, syngas is produced by steam reforming of natural gas , .
