Stereophonic sound or, more commonly, stereo, is a method of sound reproduction that creates an illusion of multi-directional audible perspective. This is usually achieved by using two or more independent audio channels through a configuration of two or more loudspeakers (or stereo headphones) in such a way as to create the impression of sound heard from various directions, as in natural hearing.

George Wallace Melville (January 10, 1841 – March 17, 1912) was an American engineer, Arctic explorer and author. As chief of the Bureau of Steam Engineering, he headed a time of great expansion, technological progress and change, often in defiance of the conservative element of the Navy hierarchy. He superintended the design of 120 ships and introduced the water-tube boiler, the triple-screw ...

1. Introduction. The use of large glazed envelopes has become common in contemporary architecture, especially in some kinds of buildings: shopping malls, atrium buildings, offices, airports and often even in museums , .. Large surfaces of glazed envelope may cause, especially in warm climates, a considerable increase in the cooling load of a building, due to the increased solar heat gain.
