4 Effect of Noise on a Baseband System Since baseband systems serve as a basis for comparison of various modulation systems, we begin with a noise analysis of a baseband system. In this case, there is no carrier demodulation to be performed. The receiver consists only of an ideal lowpass filter with the bandwidth W . The noise power at the output of the receiver, for a white noise

Another significant advance in the development of communications was the work of Wiener (1942) who considered the problem of estimating a desired signal waveform. $s(t)$ in the presence of additive noise $n(t)$, based on observation of the received signal. $r(t) = s(t) + n(t)$. This problem arises in signal demodulation.
