In physical cosmology, cosmic inflation, cosmological inflation, or just inflation, is a theory of exponential expansion of space in the early universe. The inflationary epoch lasted from 10^{-36} seconds after the conjectured Big Bang singularity to some time between 10^{-33} and 10^{-32} seconds after the singularity. Following the inflationary period, the universe continues to expand, but at ...

The Universe is all of space and time and their contents, including planets, stars, galaxies, and all other forms of matter and energy. While the spatial size of the entire Universe is unknown, it is possible to measure the size of the observable universe, which is currently estimated to be 93 billion light years in diameter. In various multiverse hypotheses, a universe is one of many causally ...

The 150 th anniversary of Edgar Allan Poe's death last October did not earn Poe any special celebration in the scientific world either in the United States or abroad. Such neglect may be seen as a continuation of the "black legend" weaved, for various reasons, around one of the most innovative American writers of the 19 th Century. In fact, his outstanding literary talent was widely ...

While he himself is a confirmed compatibilist, even a determinist, in "On Giving Libertarians What They Say They Want," Chapter 15 of his 1978 book Brainstorms, Daniel Dennett articulated the case for a two-stage model of free will better than any libertarian. His "Valerian" model of decision making, named after the poet Paul Valéry, combines indeterminism to generate alternative ...
