Notes: So far, all the "tools" students have learned about reactance, impedance, Ohm's Law, and such in AC circuits assume sinusoidal waveforms. Being able to equate any non-sinusoidal waveform to a series of sinusoidal waveforms allows us to apply these "sinusoidal-only" tools to any waveform, theoretically.. An important caveat of Fourier's theorem is that the waveform in question ...

Surface charges and the Poynting vector. In this section we try and answer the question: 'How does energy really flow in electric circuits?'. The answer is fairly standard university-level physics but is rarely mentioned in text books. Richard Feynman described the theory as 'mad' (though he agreed

it must be true).
