Compressible flow (or gas dynamics) is the branch of fluid mechanics that deals with flows having significant changes in fluid density. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less than 0.3 (since the density change due to velocity ...

As Table 1 reveals, although there is no standard or commonly accepted definition of an energy transition in the recent academic literature, there is a common theme within them. An energy transition most broadly involves a change in an energy system, usually to a particular fuel source, technology, or prime mover (a device that converts energy into useful services, such as an automobile or ...

where l is the membrane thickness, p_2 is the upstream pressure, and p_1 is the downstream pressure. Unlike flux, which depends upon l and Δp , P_A is typically viewed, to a first approximation, as being a material property that is much less dependent than flux on membrane thickness and Δp . For gas mixtures permeating through polymers, Δp is taken to be the partial pressure difference of the ...

If you've found this article while looking for a fuel efficient RV or motorhome your search may sadly end here. I hate to say it but the RV industry hasn't been forced by the consumer, or the government, to design class A motorhomes that get a Miles Per Gallon that one can be proud to share with their friends. Trust me, when we started our search for an RV we spent countless hours online ...
