NASA: Climate Change and Global Warming

The economics of global warming concerns the economic aspects of global warming; this can inform policies that governments might consider in response. A number of factors make this a difficult problem from both economic and political perspectives: it is a long-term, intergenerational problem; benefits and costs are distributed unequally both within and across countries; and scientific and ...

Examines the science and arguments of global warming skepticism. Common objections like 'global warming is caused by the sun', 'temperature has changed naturally in the past' or 'other planets are warming too' are examined to see what the science really says.

Global Warming and Climate Change skepticism examined

Beautiful read. I think it speaks volumes toward the general state of 'education' in our country. When a movement driven politically says there is 'a problem' and the solution to that problem is a tax (whether that be carbon credits or some scheme to tax carbon content), this should at least cause all people to take pause to consider...

Scientist #2 Refuting Manmade Global Warming: Dr. Denis Rancourt. Dr. Denis Rancourt believes that the idea that global warming, on its own, could negatively impact the environment, is tenuous at best. He describes manmade global warming as a psychological and social phenomenon backed by no solid scientific evidence. The problem is that the AGW movement has become a giant gravy train (estimated ...

Global dimming is the gradual reduction in the amount of global direct irradiance at the Earth's surface that was observed for several decades after the start of systematic measurements in the 1950s. The effect varies by location, but worldwide it has been estimated to be of the order of a 4% reduction over the three decades from 1960–1990.

A review of the research literature concerning the environmental consequences of increased levels of atmospheric carbon dioxide leads to the conclusion that increases during the 20th and early 21st centuries have produced no deleterious effects upon Earth's weather and climate.

Mars is not warming globally. It is hard to understand how anyone could claim global warming is happening on Mars when we can't even agree what's happening on the planet we live on. Yet they do, and the alleged reasoning is this; if other planets are warming up, then there is some solar system ...

TED Talk Subtitles and Transcript: What if we took out more greenhouse gases than we put into the atmosphere? This hypothetical scenario, known as "drawdown," is our only hope of averting climate disaster, says strategist Chad Frischmann. In a forward-thinking talk, he shares solutions to climate change that exist today -- conventional tactics like the use of renewable energy and better land ...

In the early 1990s I was visiting the White House Science Advisor, Sir Prof. Dr. Robert Watson, who was pontificating on how we had successfully regulated Freon to solve the ozone depletion problem, and now the next goal was to regulate carbon dioxide, which at that time was believed to be the sole cause of global warming.

Project Drawdown is the most comprehensive plan ever proposed to reverse global warming. We gathered a qualified and diverse group of researchers from around the world to identify, research, and model the 100 most substantive, existing solutions to address climate change. What was uncovered is a path forward that can roll back global warming within thirty years.

Drawdown

As any farmer can tell, the natural patterns of climate have been altered. We know that warming—and cooling—has happened in the past, and long before humans were around. Many factors (called “climate drivers”) can influence Earth’s climate—such as changes in the sun’s intensity and volcanic eruptions, as well as heat-trapping gases in the atmosphere.

How Do We Know that Humans Are the Major Cause of Global ...

Yes, global warming is real and most of the recent increases in temperature are directly the result of human actions. However, a number of predictions publicized in the media present unrealistic scenarios of doom and gloom.

What is Global Warming? Global warming is the slow increase in the average temperature of the earth’s atmosphere because an increased amount of the energy (heat) striking the earth from the sun is being trapped in the atmosphere and not radiated out into space.. The earth’s atmosphere has always acted like a greenhouse to capture the sun’s heat, ensuring that the earth has enjoyed
