Genetic engineering is a process that alters the genetic structure of an organism by either removing or introducing DNA. Unlike traditional animal and plant breeding, which involves doing multiple crosses and then selecting for the organism with the desired phenotype, genetic engineering takes the gene directly from one organism and inserts it in the other.

Genetic engineering - Wikipedia

1. A school nurse is teaching a 14-year-old girl of normal weight some of the key factors necessary to maintain good nutrition in this stage of her growth and development. What interventions should the nurse most likely prioritize? A) Decreasing her calorie intake and encouraging her to maintain her weight to avoid obesity B) Increasing her BMI, taking a multivitamin, and discussing body image ...
