This calendar is appropriate for grades 1-2, and covers a variety of math skills, including addition and subtraction, greater than or less than and word problems. What's unique about this calendar, though, is that the solution is equal to the day of the month.

February Math Problem of the Day Calendar {FREE}

Choose a month in 2011 and make a calendar on poster board (or foam board) - but not just ANY calendar. You will NOT write the date in each box. Instead, you will create an equation whose SOLUTION is the date. If you choose February, for example, your equation for the 15th might be " $3x + 12 = x + 42$ " (the solution is $x = 15$). NOW FOR THE RULES...

Remember to include a complete solution for each problem submitted. Department editors
Margaret Coffey, Margaret.Coffey@fcps.edu,

February 2015 Calendar and Solutions - nctm.org

Solution: As it is known, that Number of days between 5th January 1991 and 4th March 1992 = $(265 - 5)$ days of the year 1991 + 31 days of January 1992 + 29 days of February 1992 + 1 day of March 1992 (as 1992 is completely divisible by 4, hence it is a leap year and that's why February has 29 days).

Calendar Problems - SPLessons

plete solution for each problem submitted. Other sources of problems in calendar form available from NctM include Calendar Problems from the "Mathematics Teacher" (a book featuring more than 400 problems, organized by topic; stock number 12509, \$22.95) and the 100 Problem Poster (stock number 13207, \$9.00). individual members
