Fluid mechanics is the study of the flow of fluids, and is sometimes known as hydrodynamics. Properties normally ascribed to fluids include density  $\rho$ , compressibility  $\beta$  (sometimes specified in terms of the so-called second viscosity coefficient  $\lambda$ ), and dynamic viscosity  $\eta$ . In general, the motion of fluids is extremely complicated, including highly nonlinear phenomena like ...

In physics and engineering, fluid dynamics is a subdiscipline of fluid mechanics that describes the flow of fluids—liquids and gases. It has several subdisciplines, including aerodynamics (the study of air and other gases in motion) and hydrodynamics (the study of liquids in motion). Fluid dynamics has a wide range of applications, including calculating forces and moments on aircraft ...

A non-Newtonian fluid is a fluid that does not follow Newton's law of viscosity, i.e. constant viscosity independent of stress. In non-Newtonian fluids, viscosity can change when under force to either more liquid or more solid. Ketchup, for example, becomes runnier when shaken and is thus a non-Newtonian fluid. Many salt solutions and molten polymers are non-Newtonian fluids, as are many ...
