Genetic pollution is a controversial term for uncontrolled gene flow into wild populations. It is defined as "the dispersal of contaminated altered genes from genetically engineered organisms to natural organisms, esp. by cross-pollination", but has come to be used in some broader ways. It is related to the population genetics concept of gene flow, and genetic rescue, which is genetic ...

Genetic pollution - Wikipedia

A: Frequency (incidence in the general population) of the abnormal gene is: 1 in 100-200 people has hemochromatosis (double gene mutation known as a homozygote) and 1 in 8-10 people is a

carrier of hemochromatosis (single gene mutation known as a heterozygote or "het" for short).
