Chapter 11: Climate Regulation and Atmosphere Evolution through Geologic Time What do we mean by Climate? Climate is not the same as weather. It basically describes seasonal and daily weather events over a long term period. For example, the passage of a cold front over Arlington would be considered a weather event, whereas the daily average number of such passages for the month of November ...

Climate Regulation and Atmosphere Evolution through ...

This article explores the hypothesis that key human adaptations evolved in response to environmental instability. This idea was developed during research conducted by Dr. Rick Potts of the Smithsonian's Human Origins Program. Natural selection

Climate Effects on Human Evolution | The Smithsonian ...

The evolution of plants has resulted in a wide range of complexity, from the earliest algal mats, through multicellular marine and freshwater green algae, terrestrial bryophytes, lycopods and ferns, to the complex gymnosperms and angiosperms of today. While many of the earliest groups continue to thrive, as exemplified by red and green algae in marine environments, more recently derived groups ...

The Man from Taured (sometimes referred to as the Taured Mystery or the Man without a Country) is a story about a man who arrives at a Japanese airport from a country called Taured. Many people have claimed this story to be true, so the crux of the problem pertains to Taured. One would notice that there is no country by the name of Taured, either today or during the purported period of time ...

A global study has found a paradox: our water supplies are shrinking at the same time as climate change is generating more intense rain. And the culprit is the drying of soils, say researchers ...

The long dry: Why the world's water supply is shrinking ...

Abiogenesis, or informally the origin of life, is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular ...
