Sodium compounds have been known since ancient times; salt (sodium chloride) has been an important commodity in human activities, as testified by the English word salary, referring to salarium, money paid to Roman soldiers for the purchase of salt. While potash has been used since ancient times, it was not understood for most of its history to be a fundamentally different substance from sodium ...

Dipoles & Dipole Moments: Molecule Polarity - Video ...

Figure 1. You have already learned that a covalent bond forms when electrons are shared between atoms. A coordinate-covalent bond (represented by a green arrow in this diagram) forms when both of the shared electrons come from the same atom, called the donor atom (blue).. An anion or molecule containing the donor atom is known as a ligand.
