Organic chemistry is a subdiscipline of chemistry that studies the structure, properties and reactions of organic compounds, which contain carbon in covalent bonding. Study of structure determines their chemical composition and formula. Study of properties includes physical and chemical properties, and evaluation of chemical reactivity to understand their behavior.

Cross-coupling reactions of trifluoroborate salts are palladium-catalyzed reactions that result in the coupling of an electrophilic organic halide or pseudohalide and a nucleophilic trifluoroborate. Trifluoroborates offer several advantages over boronic acid nucleophiles, which have traditionally been employed for the Suzuki-Miyaura reaction.
