Cortex. In a dissected kidney, it is easy to identify the cortex; it appears lighter in color compared to the rest of the kidney. All of the renal corpuscles as well as both the proximal convoluted tubules (PCTs) and distal convoluted tubules are found here. Some nephrons have a short loop of Henle that does not dip beyond the cortex. These nephrons are called cortical nephrons.

25.3 Gross Anatomy of the Kidney - Anatomy and Physiology

The muscular system is responsible for the movement of the human body. Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight.

Muscular System - Muscles of the Human Body

The gross anatomy of a muscle is the most important indicator of its role in the body. There is an important distinction seen between pennate muscles and other muscles. In most muscles, all the fibers are oriented in the same direction, running in a line from the origin to the insertion.

Muscle - Wikipedia

7. Embryologically, the brain arises from the rostral end of a tubelike structure that quickly becomes divided into three major regions. Groups of structures that develop from the embryonic brain are listed below.

Basal view of heart showing relationship of great vessels and atria. The left atrium (LA) has a smooth endocardium while the right atrium (RA) is trabeculated. The aorta (Ao) is posterior to the pulmonary trunk (PT) but anterior to the atrial septum (AS).

Anatomy of the Heart - Cardiology

What are VO₂ and VO₂max?. VO₂ (or oxygen consumption) is a measure of the volume of oxygen that is used by your body to convert the energy from the food you eat into the energy molecules, called adenosine triphosphate (ATP), that your body uses at the cellular level. VO₂max (or maximal oxygen consumption) is simply the maximum possible VO₂ that a given person can achieve.
