These changes allow different nuclear fusion reactions to occur. Over time, two or more helium nuclei will combine to form the nuclei of slightly heavier elements. First, two helium nuclei combine to form a beryllium nucleus. Then another helium nucleus can add to the beryllium nucleus, forming a carbon nucleus.

An average smartphone may contain up to 62 different types of metals. One rather obscure group of metals—the rare-earth metals—plays a vital role. These rare-earth metals include scandium and yttrium, as well as elements 57–71. Elements 57–71 are known as the lanthanides, because they begin with the element lanthanum.
