Here,  $\nu$  and  $E$  denote the Poisson's ratio and the Young's modulus, while subscripts  $s$  and  $i$  refer to the specimen and the indenter, respectively. For consistency, we will always refer to  $E_s$  as the Young's modulus of the sample material.  $E_{eff}$  will be referred as the effective indentation modulus and the term  $E_s / (1 - \nu_s^2)$  will be referred to as the indentation sample modulus or simply the ...

Package testing or packaging testing involves the measurement of a characteristic or property involved with packaging. This includes packaging materials, packaging components, primary packages, shipping containers, and unit loads, as well as the associated processes. Testing measures the effects and interactions of the levels of packaging, the package contents, external

forces, and end-use.
