ABSTRACT. It is common practice to perform intergranular corrosion testing in accordance with ASTM (1) G28 on solid solution nickel alloys, e.g. UNS N08825 (Alloy 825) and UNS N06625 (Alloy 625). The results of such tests are applied widely as acceptance tests for parent and welded materials, and as such are essentially used to confirm the suitability of these materials for service.

where A_{1n} is the area normal to the flow at inlet, and the projected frontal area of the rotor (or annulus area) is H_s and taken to be constant through the rotor. To find the conditions at exit, the non-dimensional mass flow rate at exit can be written in terms of the preceding, using the fact that through a rotor blade with constant mean radius, $T_{01,rel} = T_{02,rel}$:

The solution of Adriaan van Roomen (1596) is based on the intersection of two hyperbolas. Let the given circles be denoted as C_1 , C_2 and C_3 . Van Roomen solved the general problem by solving a simpler problem, that of finding the circles that are tangent to two given circles, such as C_1 and C_2 . He noted that the center of a circle tangent to both given circles must lie on a hyperbola whose ...

The yield strength, for these purposes, is defined as the tensile stress required to produce a total elongation of 0.5% of the length. However, the case of P-110 casing is an exception where yield is defined as the tensile stress required to produce a total elongation of 0.6% of the length.

In classical statistical mechanics, the equipartition theorem relates the temperature of a system to its average energies. The equipartition theorem is also known as the law of equipartition, equipartition of energy, or simply equipartition. The original idea of equipartition was that, in thermal equilibrium, energy is shared equally among all of its various forms; for example, the average ...
