God's algorithm is a notion originating in discussions of ways to solve the Rubik's Cube puzzle, but which can also be applied to other combinatorial puzzles and mathematical games. It refers to any algorithm which produces a solution having the fewest possible moves, the idea being that an omniscient being would know an optimal step from any given configuration.

A primitive root of a prime p is an integer g such that $g \pmod{p}$ has multiplicative order $p-1$ (Ribenboim 1996, p. 22). More generally, if $\text{GCD}(g,n)=1$ (g and n are relatively prime) and g is of multiplicative order $\phi(n)$ modulo n where $\phi(n)$ is the totient function, then g is a primitive root of n (Burton 1989, p. 187). The first definition is a special case of the second since $\phi(p)=p-1$ for ...

A complex number is a number that can be expressed in the form $a + bi$, where a and b are real numbers, and i is a solution of the equation $x^2 = -1$. Because no real number satisfies this equation, i is called an imaginary number. For the complex number $a + bi$, a is called the real part, and b is called the imaginary part. Despite the historical nomenclature "imaginary", complex numbers are ...

California is known for its unusually large number of cults and dodgy religious movements. The reasons for this may include the lack of an obviously dominant Protestant establishment, an economy based on get-rich-quick schemes and frequently failing businesses, a diverse population of rootless people in a cultural blank slate, or even the heady effects of California weather.
