The hints and answers for these friction problems will be given next. Hints And Answers For Friction Problems Hint and answer for Problem # 1 The minimum force required to prevent slipping is the minimum force that will prevent the block from sliding down the incline. It is $F_{\min} = 10g\sin(45^\circ) - 10g\cos(45^\circ) \times 0.5$. The maximum force that can be ...

Lab#4 Friction Lab. FRICTION. In this activity you will examine how static and kinetic frictional forces vary as the normal force between an object and a surface is changed. You will apply a horizontal force to a block of wood loaded with weights in order to pull the block at constant velocity across a horizontal plane.

Answers may vary. Possible answer: Large amount of friction can be desirable when a task is being performed that requires a strong grip between two surfaces. Creating a large amount of friction insures that the two objects won't slip apart. This is necessary for things such as golf clubs and running shoes.

Answer : Friction is the force that opposes the relative motion between the two surfaces of objects in contact. The force of friction always acts in the direction opposite to that of the applied force. Since friction is a type of force, it is measured in Newton (N). Answer : Aeroplanes are streamlined so that air offers minimum friction.

Friction Subjective Question and Answer - Educomp

Throughout the experiment we have not considered the force of friction. Even though this experiment has not included friction, it was present in between the cart's wheels and along the surface of the track. Even though it is treated as frictionless, friction is always present everywhere, even if it is regarded as not present.
