Semiconductor materials are nominally small band gap insulators.The defining property of a semiconductor material is that it can be doped with impurities that alter its electronic properties in a controllable way.. Because of their application in the computer and photovoltaic industry—in devices such as transistors, lasers, and solar cells—the search for new semiconductor materials and the ...

A temperature coefficient describes the relative change of a physical property that is associated with a given change in temperature.For a property R that changes by dR when the temperature changes by dT, the temperature coefficient α is defined by the following equation: = Here α has the dimension of an inverse temperature and can be expressed e.g. in 1/K or K −1.

Raw signal from organolead halide perovskite based X-ray detectors was sampled using two types of data acquisition devices (DAQ): a USB wireless transceiver system (eZ430-RF2500 Texas Instruments) and a 128-channel current to digital converter ADAS1128 by Analog Devices [].The radiation source was a Varian Ximatron™ KVp X-ray system with a tungsten-rhenium target and the source to sample ...

An interesting feature of perovskite materials is that structural phase transition depends on a dynamic tilting of the octahedra in the lattice .In the case of MAPbI 3, MA + cation resides within the inorganic framework of corner sharing PbI 6 octahedra, which has different tilting characteristics for the differing orthorhombic, tetragonal and cubic structures.
