Despite it all, Uber may still be worth the investment: the theory of the company remains plausible, and the company is decreasing its losses (and could do so more quickly if it spun off its autonomous driving unit, as I believe they should). Moreover, I noted above how suitable China and Southeast Asia are for ride-sharing: investing in Uber is the most practical way of investing in ride ...

It's usually based on significant figures of both the exponent and significand in base 2, not base 10. From what I can tell in the C99 standard, however, there is no specified precision for floats and doubles (other than the fact that 1 and 1 + 1E-5 / 1 + 1E-7 are distinguishable [float and double repsectively]). However, the number of significant figures is left to the implementer (as well as ...

Yes. Though by how much I can't say. The easiest way to determine that is to benchmark it. The pow function uses doubles... At least, if it conforms to the C standard. Even if that function used bitshift when it sees a base of 2, there would still be testing and branching to reach that conclusion, by which time your simple bitshift would be completed.

Constants refer to fixed values that the program may not alter during its execution. These fixed values are also called literals.. Constants can be of any of the basic data types like an integer constant, a floating constant, a character constant, or a string literal. There are enumeration constants as well.

An irrational number is a number that cannot be expressed as a fraction p/q for any integers p and q. Irrational numbers have decimal expansions that neither terminate nor become periodic. Every transcendental number is irrational. There is no standard notation for the set of irrational numbers, but the notations  $Q^{\wedge}$ , R-Q, or R\Q, where the bar, minus sign, or backslash indicates the set ...
