In function notation, where f is the function, $f(x)=3x-10$. Using $f(x)$ means you can write things like $f(0)$ which means: what is the value of the function when $x=0$?

A function is simply a rule that takes one number and turns it into another. But some special conditions must apply for it to be a true mathematical function.

Function. A function is a relation that uniquely associates members of one set with members of another set.More formally, a function from to is an object such that every is uniquely associated with an object .A function is therefore a many-to-one (or sometimes one-to-one) relation.The set of values at which a function is defined is called its domain, while the set of values that the function ...

The factorial n! is defined for a positive integer n as $n!=n(n-1)...2\cdot1$. (1) So, for example, $4!=4\cdot3\cdot2\cdot1=24$. An older notation for the factorial was written (Mellin 1909; Lewin 1958, p. 19; Dudeney 1970; Gardner 1978; Conway and Guy 1996). The special case 0! is defined to have value $0!=1$, consistent with the combinatorial interpretation of there being exactly one way to arrange zero ...

Section 1-1 : Functions. In this section we're going to make sure that you're familiar with functions and function notation. Both will appear in almost every section in a Calculus class so you will need to be able to deal with them.

While perusing an application that I'm documenting, I've run across some examples of bang notation in accessing object properties/methods, etc. and in other places they use dot notation for what seems like the same purpose.. Is there a difference or preference to using one or the other? Some simple googling only reveals limited information on the subject with some people actually using it in ...

An array formula (one that spans multiple cells) can do calculations on rows and columns of cells where you might otherwise need to use several formulas. For example, you can count the number of characters that are contained in a range of cells, sum only numbers that meet certain conditions (such as the lowest values in a range or numbers that fall between an upper and lower boundary), and sum ...

Being able to find a derivative is a "must do" lesson for any student taking Calculus. Derivatives are found all over science and math, and are a measure of how one variable changes with respect to another variable.

So, we'll just be doing domains on these -- which is really where the action is anyway. Asking for the domain of a function is the same as asking "What are all the possible x guys that I can stick into this thing?"

Section 3-6 : Combining Functions. The topic with functions that we need to deal with is combining functions. For the most part this means performing basic arithmetic (addition, subtraction, multiplication, and division) with functions.

Ah, memories of data munging back from when I did some massive number cross checking in Excel (never again).. When you punch in long numeric strings into Excel, try say, 12345678901234567890 (20 digits), Excel will generally convert it for you, meaning that the 20 digit number you've just tapped in has been cut back to be only about fifteen significant figures.

Why does Excel treat long numeric strings as scientific ...

Introduction. Music notation software, like all other software, needs to be functional, practical, and also pleasing-to-use. The specialized function and complexity of music notation often contributes to the cost of notation programs.

The Riemann zeta function $\zeta(s)$ is a function of a complex variable $s = \sigma + it$. (The notation s, σ, and t is used traditionally in the study of the zeta function, following Riemann.). The following infinite series converges for all complex numbers s with real part greater than 1, and defines $\zeta(s)$ in this case: $= \sum = \infty - = + + + \cdots = $ >It can also be defined by the integral
