Psychological evaluation is defined as a way of assessing an individual's behavior, personality, cognitive abilities, and several other domains. The purpose behind many modern psychological evaluations is to try to pinpoint what is happening in someone's psychological life that may be inhibiting their ability to behave or feel in more appropriate or constructive ways; it is the mental ...

An embedded system is a controller programmed and controlled by a real-time operating system (RTOS) with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. It is embedded as part of a complete device often including hardware and mechanical parts. Embedded systems control many devices in common use today.

Embedded system - Wikipedia
WHAT WAS THE AIM. To ask the fundamental question: "How do we design, not for a faceless future, but for an ever-changing present?" To answer this question we sought to understand what are the key drivers of change in healthcare, review prevalent trends in response, assess the facility implications of these trends, identify innovations and evidence support through literature searches and case ...

Most operations in pandas can be accomplished with operator chaining (groupby, aggregate, apply, etc), but the only way I've found to filter rows is via normal bracket indexing. df_filtered = df[df['column'] == value] This is unappealing as it requires I assign df to a variable before being able to filter on its values. Is there something more like the following?

python - pandas: filter rows of DataFrame with operator ...

1 As everything else in this answer, that's a generalisation. The property of evaluating a computation when its result is needed rather than sequentially where it's called is known as "laziness", and not all functional languages are actually universally lazy, nor is laziness restricted to functional programming.

What is the difference between procedural programming and ...
