Derivative of the Gamma Function - Steven Zheng | Brilliant
The derivatives of the Gamma Function are described in terms of the Polygamma Function. [math] \displaystyle \Gamma^{\prime}(z)=\Gamma(z)\psi_0(z) [/math] The proof arises from expressing the Gamma Function in the Weierstrass Form, taking a natu...

What is the derivative of the gamma function? - Quora
(7) implies that the second derivative of lnΓ(x) is positive for all real and positive x. That is, the Gamma function is log-convex for positive values of x. I mention this fact because one can prove that given a function Γ(x) that satisfies Γ(1) = 1, xΓ(x) = Γ(x + 1) and is log-convex for 0 < x < ∞, then this function is uniquely defined.

The logarithmic derivative of the Gamma function
