Compiler correctness is the branch of software engineering that deals with trying to show that a compiler behaves according to its language specification. [self-published source?] [non-primary source needed] Techniques include developing the compiler using formal methods and using rigorous testing (often called compiler validation) on an existing compiler.

The actor model in computer science is a mathematical model of concurrent computation that treats "actors" as the universal primitives of concurrent computation. In response to a message that it receives, an actor can: make local decisions, create more actors, send more messages, and determine how to respond to the next message received. Actors may modify their own private state, but can only ...
